How to Use This Template

REFERENCE
REMOVE BEFORE SUBMITTING

- Make a copy of this slide deck.
- We have provided these slides as a guide to ensure that you submit all the required components to successfully complete your project.
- All red text should be replaced with the results of your analysis.
- When presenting your project, please only think of this as a guide. We encourage you to use creative freedom when making changes as long as the required information is present.
- Don’t forget to delete this slide before you submit your project.

Agenda

Findings of linear regression modeling with tech salary data

- Data Description
- Regression Results
- Interpretation and Next Steps

Data Description

[Your description of the number of employees that are in the dataset, how missing data were handled, the range of salaries, and any plots or estimates that suggest certain features in the dataset are likely correlated to salary]

[You may expand this to as many slides as you need]

Regression Results

[Share the regression output associated with your linear model, identify which variables are statistically significant in their relationship with salary, remove variables from the model that are not statistically significant, identify how well the model fits the data]

[You may expand this to as many slides as you need]

Interpretation and Next Steps

[Choose **TWO VARIABLES in the model** and describe the expected range of change in salary related to changes in this variable, and how confident you are that these changes are likely to happen]

[You may expand this to as many slides as you need]
